

DISASTER RECOVERY FOR KVM

Recover in seconds. Survive ransomware. Cut DR cost.

Enterprise DR built natively for Proxmox, OLVM, oVirt and RHV.

KVM platforms (Proxmox, OLVM, oVirt, RHV) now run serious production workloads, but the disaster recovery tooling hasn't kept pace. Backup products leave you exposed: hours of data loss, slow restores, and ransomware found only after it is already in your backups. **KVMDR is purpose built for disaster recovery** that protects KVM workloads continuously, recovers in under a minute, and uses AI powered detection to catch ransomware as it moves, with AI driven recovery to the cleanest point before the attack. Fully on premises and air gap capable.

AI based detection

RANSOMWARE PROTECTION

Near zero RPO

CONTINUOUS PROTECTION

Enterprise grade

SIMULATION · MIGRATION

WHY IT MATTERS TO THE BUSINESS

**Built in orchestration, automation & backup with DR**

One platform. No extras.

**In flight detection**

Ransomware caught live in the replication stream.

**Warm DR, recovery in seconds**

Replicas ready to run at full performance.

BUILT FOR REGULATED, HIGH STAKES ENVIRONMENTS

Defence · Financial services · Healthcare · Government · Transport · Energy · Deep tech

Replicated VM data never leaves your appliance.

See a live DR drill against your own workloads.
